

- Detect theft and other SiloBag issues in real time
- Receive email and SMS alerts identifying the exact location of the problem

Increase revenues significantly

- Make better business decisions based on real data from inside the SiloBag
- Reduce loss: take timely and corrective actions
- Increase profits: sell the right SiloBag at the optimal time

Take Control of your SiloBag Assets

Simple and effective

An innovative, wireless sensor network delivers real-time measurements of the SiloBag environment.

In the event of theft or SiloBag puncture, you receive an email alert to your inbox or an SMS to your cellular phone specifying the location of the silo bag and the location of the problem in the silo bag.

You can then take immediate corrective action.

The CartaSense monitoring system ensures security, safety and quality of the silo bags, and their content, minimizing your losses.

The system provides increased profits and a quick return on investment

Wireless sensors located inside and outside the silo bags, measure temperature and relative humidity and then transmit the data in real-time to a central location.

CartaSense system provides global coverage of SiloBag assets, with direct access from a computer or Smartphone.

CartaSense sophisticated web based application analyzes data and alerts you when there is a risk of a damage to your silo bag.

The System allows users to access historical data for analysis and statistical calculations.
